2.3 EUT Description

The following features describe EUT represented by this report

Test Voltage : AC 120 V / 60 Hz

EUT Highest operating frequency: Below 108 MHz

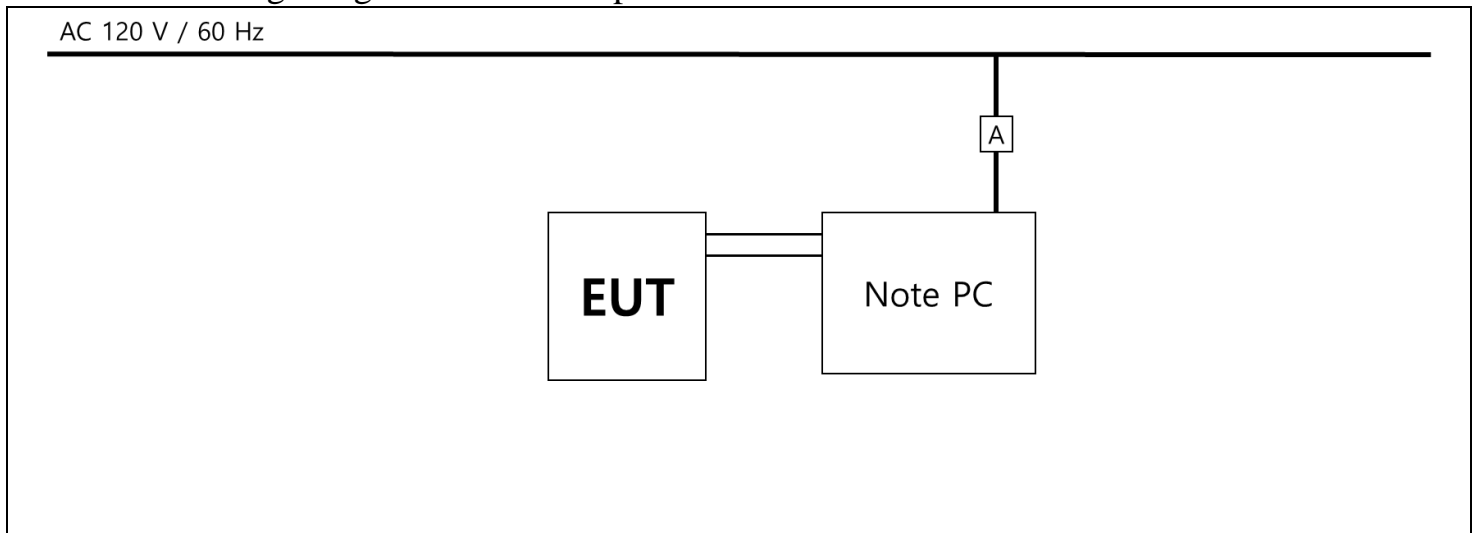

Model Name: Clium Cleaner Fit V1

2.4 Operating Conditions

The equipment under test was operated during the measurement under following

Test mode	Normal Operating
1	The EUT power was turned on and tested after checking the operation status through the Note PC.

Test Area	Semi anechoic chamber (3m) – Below 1GHz Fully anechoic chamber(10m) – Above 1GHz
Test date	0000.00.00 - Semi anechoic chamber (3m) 2024.08.24 - Fully anechoic chamber(10m)

4.1.1 Measurement procedure

The test was done at a 3 m fully anechoic chamber test site with a quasi-peak detector.

EUT was placed on a non-metallic table height of 0.8 m above the reference ground plane.

They were folded back and forth forming a bundle 0.3 m to 0.4 m long and were hanged at a 0.4 m height to the ground plane.

Cables connected to EUT were fixed to cause maximum emission.

Test was made with the antenna positioned in both the horizontal and vertical planes of polarization.

The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

4.1.3 Test data

* Receiving Antenna Mode : Horizontal, Vertical

* 3 m Chamber

* Note : Reading = Test Receiver meter,

Pol.= Polarization → H = Horizontal, V = Vertical

Result [dB($\mu\text{V}/\text{m}$)] = Reading [dB(μV)] + Antenna factor [dB/m] + Cable Loss [dB] – Amp Gain [dB]

If, in accordance with §15.33 of this part, measurements must be performed above 1000 MHz, compliance above 1000 MHz shall be demonstrated with the emission limit in paragraph (a) or (b) of this section, as appropriate. Measurements above 1000 MHz may be performed at the distance specified in the CISPR 32 publications for measurements below 1000 MHz provided the limits in paragraphs (a) and (b) of this section are extrapolated to the new measurement distance using an inverse linear distance extrapolation factor (20 dB/decade)

*The limit decreases linearly with the logarithm of frequency.

4.2.2 Measurement procedure

Mains

The measurements were performed in a shielded room. EUT was placed on a non-metallic table height of 0.8 m above the reference ground plane. The rear of table was located 0.4 m to the vertical conducted plane. EUT was power through the LISN, which was bonded to the ground plane. The LISN power was filtered. Each EUT power lead, except ground (safety) lead, was individually connected through a LISN to input power source. All I.O cables are positioned to simulate typical actual usage according to the test standard. Both lines of power cord, hot and neutral, were measured.
